## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. The indicated allowability of claim 13-16 is withdrawn in view of the newly discovered reference(s) to US 2005/0139928 to Kavalieros et al. Rejections based on the newly cited reference(s) follow.

### ***Double Patenting***

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ

619 (CCPA 1970); and In re Thorington, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 13-16 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claim 1-13 of copending Application No. 10/748,383 (US Pub 2005/0139928 to Kavalieros) in view of US 6835639 to Rotondaro et al. Claims 1-13 of the co-pending application claimed essentially the same method of making a CMOS transistor in the claims 13-16 of the instant application.

But, the co-pending application does not expressly disclose converting the p-type polysilicon layer to a silicide to generate a silicide PMOS gate electrode.

However, Rotondaro discloses the method converting substantially all of the PMOS polysilicon layer (si), column 3 lines 6 and 59, fig. 2, to a silicide, column 3 line 26, fig. 7. At the time the invention was made; it would have been obvious to one of ordinary skill in the art to use the PMOS silicide gate teaching of Rotondaro with the co-pending application's method, because it would have created a CMOS having PMOS gate electrode with different work function as taught by Rotondaro, see abstract.

This is a provisional obviousness-type double patenting rejection.

### ***Response to Arguments***

4. Applicant's arguments with respect to claims 13-16 have been considered but are moot in view of the new ground(s) of rejection.
